

MY SLOTH NON - CHRONOLOGICAL REPORT

INTRODUCTION

I chose the Sloth because it spends its time hanging upside down in trees, eating and doing very little.

WHAT IS A SLOTHS HABITAT ?

A sloth's ancestors live in America. Modern sloths live in central South America in the Amazon rainforest. When it is raining they sleep and take food up into the tall trees. They spend most of their time up in the trees.

WHAT DO SLOTHS LOOK LIKE?

Sloths are ranged between 2 and 5 types . Sloths either have 2 claws or 3 claws . They have flat short heads, short snouts, big eyes, long legs, tiny ears, curved claws, sad looking eyes, stubby tails and roundish heads. The two toed sloths are bigger than the three toed sloths. Two toed sloths look like they are always smiling but they aren't.

What is a Sloth's diet?

A Sloth mainly eats leaves and insects. But, I bet you didn't know that they also eat Carrion (decaying flesh), lizards and fruit. Whatever they are eating they do it very slowly!

Fun facts

- Sloths go to the toilet about once a week!
- When they poo they loose about $\frac{1}{3}$ of their weight!
- They are not aggressive because they're so lazy!
